# **Changing Math Instruction with STEM Integration**

# Facts on Computer Science

There are currently 523 222 open Computer Science-related jobs that are unfilled

71% of all new jobs in STEM are computer related yet only 8% of STEM graduates have Computer Science qualifications

A Computer Science major earns 40% more than the college graduate

In elementary, only 10% of classrooms incorporate STEM

Only  $\frac{1}{5}$  of students studying computer sciences are female

Information from [code.org](http://code.org)

Computing jobs are in every industry across the country and will grow at twice the rate of other jobs

# “Traditional” Math Instructional

Textbook driven

Instruction was compartmentalized into units

“Monkey see, monkey do” style math examples

Unrelated mathematical terms

Little to no importance placed on collaboration

Emphasis on single, correct answer

Point A to Point B thinking

# How effective is traditional math instruction?

# Making Students “Doers” of Math

For effective math instruction, students need to:

Understand mathematical processes

Dialogue about math in real life situations

Apply classroom mathematics to their everyday lives

Represent and model mathematical thinking

Value incorrect responses at the same value as correct responses

Multiple methods to arrive at a response

# Computational Thinking

# Computational Thinking

- Decomposing larger problems into smaller portions that need solving

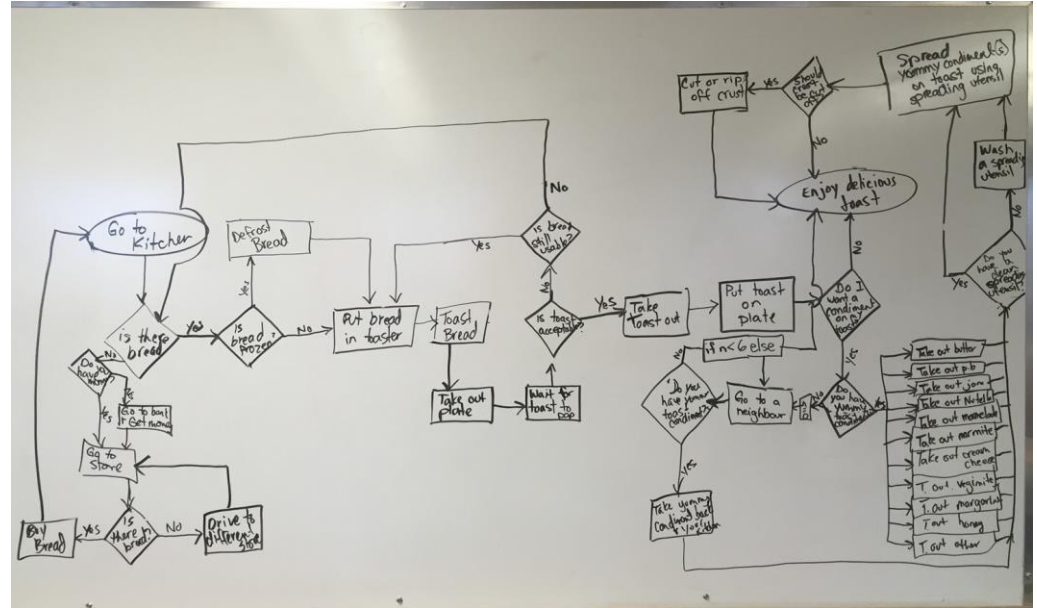

# CodeSpeak

To understand code, students need to understand the circumstances..

Term	Definition	Example
Conditional	Code that runs only when specific conditions are met	“If it rains, I will bring my umbrella.”
Function	A named set of commands that can be run whenever needed.	“When mom tells me to set the table, I know that involves counting plates, getting napkins . . .”

# Algorithmic Thinking

- Providing students with a simple task and having them write the algorithm to see it through, is a great way to introduce CodeSpeak
- Easily connects to literacy programming (procedural writing)

# How to Start Teaching Code

Fact: Ethan Elliott, programmer for 2056,  
learned to code starting in Grade 4  
AT HOME!

# History of CS in Schools

Seymour Papert

# ● Teaching Code - Dos and Don'ts

- Do - Start with small goals
- Do - Focus on a few offerings - Scratch
- Do - Find connections with math
- Do - Seek help so that you don't give up
- Don't - Use Hour of Code with no follow up
- Don't - Assume Coding is only for "smart" kids
- Don't - Rely on tools such as Khan Academy that focus on programming language

# Coding Shapes

# Try to Code a Square or Diamond

[scratch.mit.edu](https://scratch.mit.edu)

# Coding Shapes

When  Bear is Tapped

- Repeat Times 2
  - Leave a Trail Color  Width 10
    - Move Forward 300
    - Turn 120 Degrees
    - Move Forward 200
    - Turn 60 Degrees

End

End

When  Octopus is Tapped

- Repeat Times 2
  - Leave a Trail Color  Width 10
    - Move Forward 200
    - Turn 120 Degrees
    - Move Forward 200
    - Turn 60 Degrees

End

End

When  Dino is Tapped

- Repeat Times 2
  - Leave a Trail Color  Width 10
    - Move Forward 200
    - Turn 90 Degrees
    - Move Forward 100
    - Turn 90 Degrees

End

End

# Coding Shapes

Handwritten coding notes on a blue bulletin board, organized into several sheets of lined paper. The notes describe various coding tasks and algorithms for a robot.

**Top Left Sheet:** "Repeat 3 MOVE Forward 200 turn 120 When Device \* is tapped" with a drawing of a triangle.

**Top Middle Sheet (Daria and Wilian):** "When ipad is tapped: draw a trail (width 20) move forward 300 turn 90 degrees move forward 300 turn 90 degrees move forward 300 turn 90 degrees move forward 300 turn 90 degrees"

**Top Right Sheet (Cupcake):** "When ipad is tapped: Draw a trail width 20 Move forward 200 Turn degrees 90 Repeat forever Move forward 200 End End" and "Came e Connor".

**Middle Left Sheet:** "When ipad is tapped: Draw a trail color green width 20 Turn 45 degrees Move forward 100 3-times Turn 90 degrees Move forward 100 Turn 45 degrees"

**Middle Middle Sheet (Felix & Arid):** "When Device is tapped: move forward [ ] Turn [ ] degrees Set speed to [ ] Draw trail [ ] End" and "Circle 1: When circle is pressed Draw a trail width 15 Move forward 500 Set angle 270 End" and "Circle 2: When circle is pressed Draw a trail 15 Move forward 500 Set angle 270 End".

**Middle Right Sheet (Ashley, Ashlee, Noomi):** "Cupcake: Repeat times 90 Move forward 4 Turn degrees 4 End End" and "Crocodile: Repeat 4 Move forward 100 Turn degrees 90 End End".

**Bottom Middle Sheet:** "Space 100 Draw a trail color [ ] width (10) Move forward (250) Move forward (100) Turn degrees (90) Turn degrees (90) Turn degrees (90) End End".

# Coding Shapes

- Provides students opportunities to explore the geometric properties of shapes
- Great application for geometric concepts - i.e. enlargements & reductions; congruence & similar; etc.
- Students are more willing to naturally collaborate and ask for help from each other when writing code
- Excellent opportunity to co-learn along with your students!

# Coding Challenges

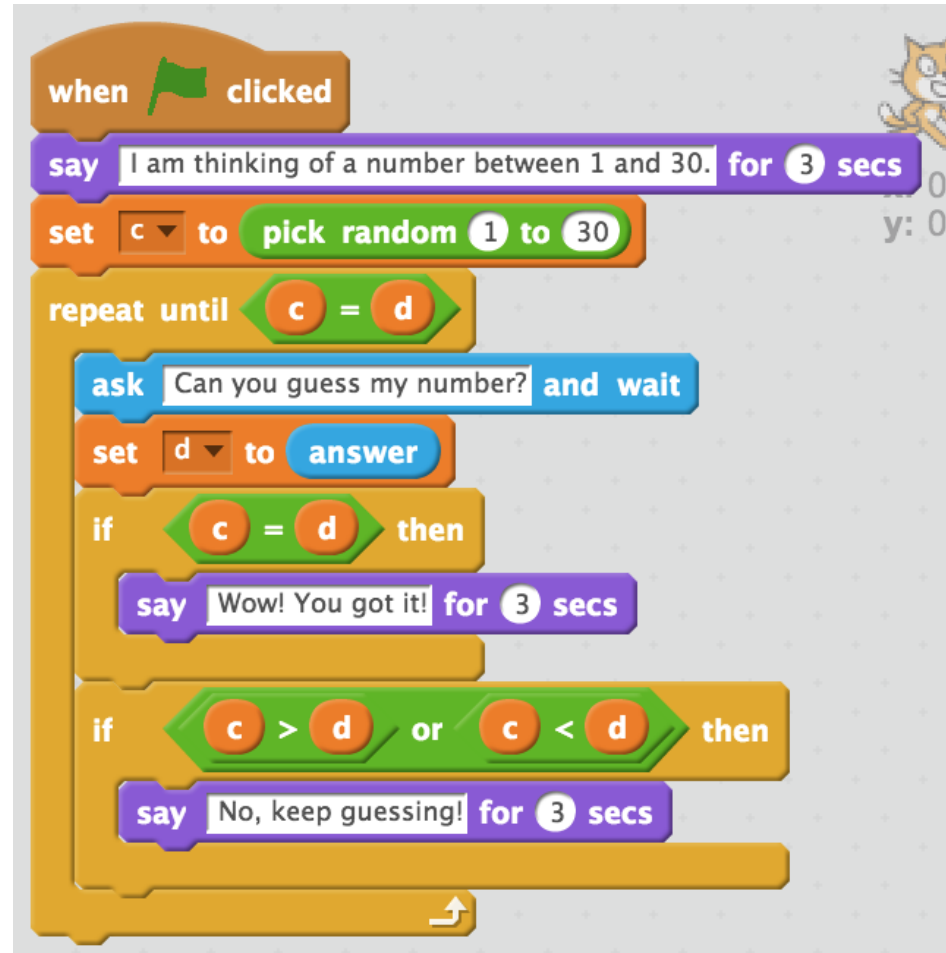

Create a program . . .

- Indicates whether a number is even or odd
- That converts metric conversion
- Create a number guessing program
- That drills multiplication facts

# Coding Challenges

Where is the math in this program?

Where is the CT?

# Coding - Student Work

Code for Calculating Square Roots

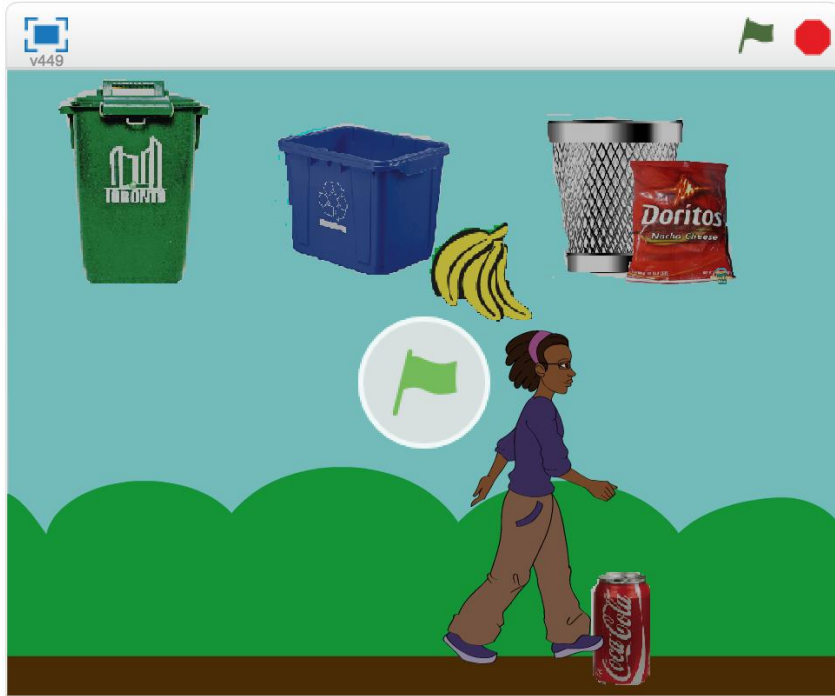

```
When Flag is clicked
  Say Hello! for 2 secs
  Say I can calculate square roots! for 3 secs
  Wait 1 sec
  ask What number do you want me to find the square root of
  set a to answer
  set b to sqrt of a
  say join The square root is... b for 3 secs
  say If you want to try again, press the right arrow. for 2 secs
  if Key right arrow NOT pressed? then
    say Ok goodbye! for 2 secs
  else
  Repeat 10
    ask Do you have another number? and wait
    set a to answer
    set b to sqrt of a
    say join The square root is... b for 3 secs
```

```
When  clicked
  Say I can do most of your math problems for 5 secs
  Wait 2 secs
  Say For Multiplication hit spacebar for 5 secs
  Wait 2 secs
  Say For Addition hit Up Arrow for 5 secs
  Wait 2 secs
  Say For Subtraction hit Down Arrow for 5 secs
  Wait 2 secs
  Say For Division hit 2 key for 5 secs

When Space Key pressed
  Say So you choose Multiplication for 2 secs
  Ask What's your first number? and wait
  Set A to Answer
  Ask What's your second number? and wait
  Set B to Answer
  Set C to A * B
  Say Join The Product is C for 5 secs

When up Arrow Key is pressed
  Say So you choose addition for 3 secs
  Ask What's your first number? and wait
  Set A to Answer
  Ask What's your second number? and wait
  Set B to Answer
  Set C to A + B
  Say Join The sum is C for 5 secs
```

# Coding - Student Work in Other Areas

# Coding - One Last Sample ...

# Finding the Math

A great teaching opportunity, when teaching through CS, is to have students find the math in what they are doing. They are always amazed at what they are able to identify. Find opportunities in math activities to integrate code!

# Coding - Instructions as Extensions

Start at the top of path  
Repeat until bottom of path  
    Toss coin  
    If coin = RED  
        Go 1 step on RED  
    Else  
        Go 1 step on  
        YELLOW path  
    End if  
End Repeat  
Circle your number

Courtesy of Prof George Gadanidis

**Circuits: It Should Be Taught  
Every Year!**

# Circuits - Teaching Points

- Current electricity concerns the travel of electrical charge
- Conductors, such as electrical power, allow charge to travel easily
- In a circuit, we can identify the power unit, conductor and the load
- Objects require a continuous current to work (not a static charge)
- Circuits may have a breaker

# Circuits - Snap Circuits

# Circuits - Makey Makey

- Great tool for students to explore circuits
- Allows to explore and discover materials capable of carrying an electric current
- Fantastic extension of Scratch-coded games

# Arduino Uno

```
Controlling_LED_by_Button | Arduino 1.6.7
Controlling_LED_by_Button
const int ledPin = 13; //the number of the led pin
/*****/
void setup()
{
  pinMode(keyPin, INPUT); //initialize the key pin as input
  pinMode(ledPin, OUTPUT); //initialize the led pin as output
}
/*****/
void loop()
{
  //read the state of the key value
  //and check if the kye is pressed
  //if it is, the state is HIGH
  if(digitalRead(keyPin) == HIGH )
  {
    digitalWrite(ledPin, HIGH); //turn on the led
  }
  else
  {
    digitalWrite(ledPin, LOW); //turn off the led
  }
}
/*****/
```

# **Design Thinking - Unleashing Creativity**

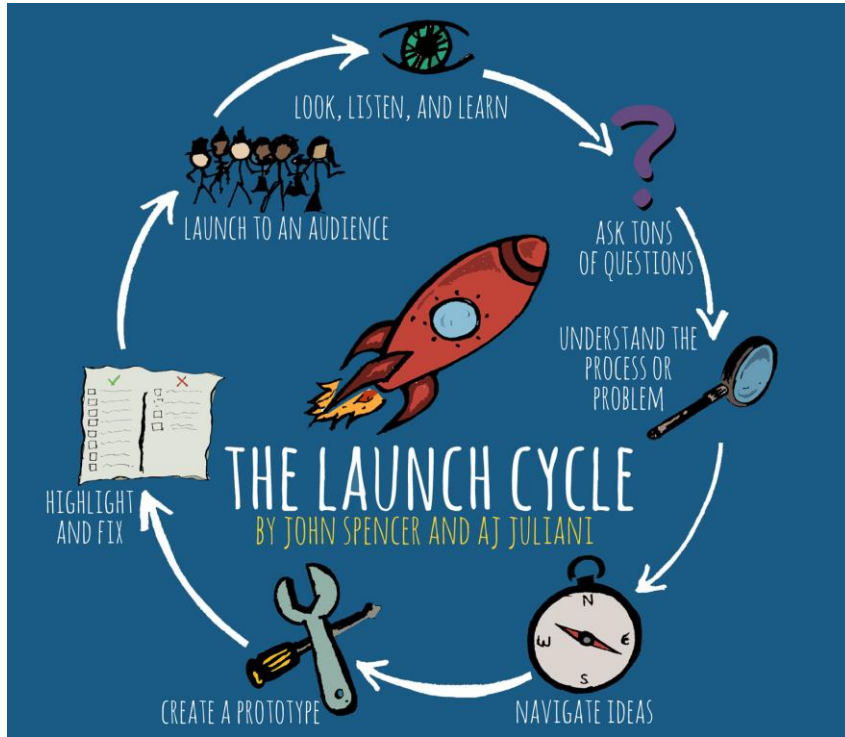

# Design Thinking

## David Kelley

- Founder and Chairman of IDEO
- Professor at Stanford University
- Advocate for Design Thinking in schools

# Design Thinking

- Research and design a roller-coaster
- Research and design a trash sorter
- Paper Airplanes carrying a certain weight

# **Robotics - Kids' Roadmap to 2056**

# Vex Robots - Building Phase

Thoughts:

- How the gears work
- Back motors only
- Terminology
- Doing “wheelies”
- Comparison with circuits
- Weight distribution
- Friction

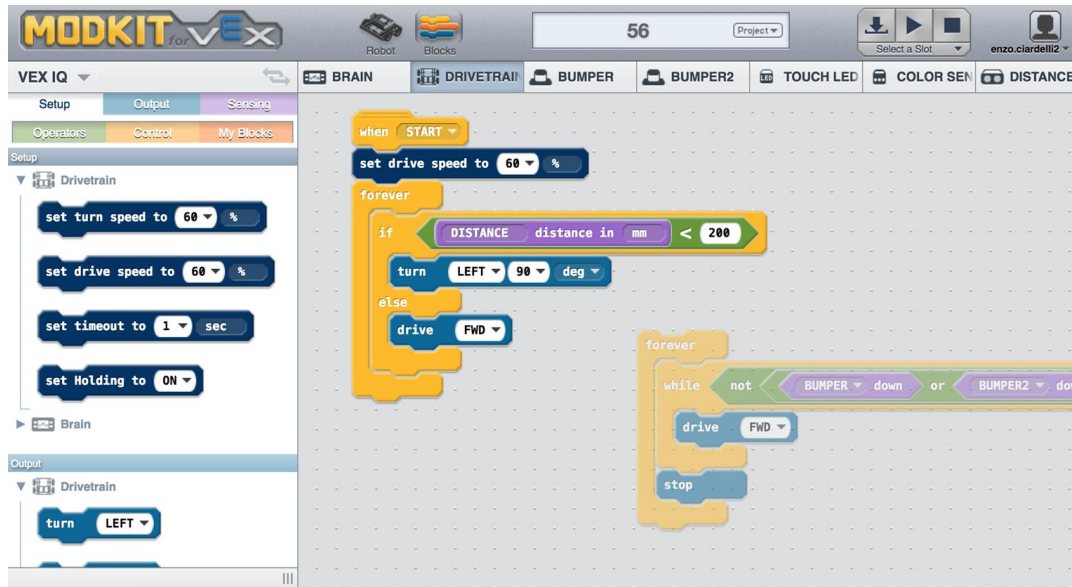

**VEX challenges allow students to conceptualize and apply abstract mathematical and scientific principles without even realizing they are doing so!**

# Vex Robots - Programming Phase

# Vex Robots - Programming Phase

The Vex Robot is Programmed so that it does not hit obstacles. Kids had to figure out how to program the distance sensor. They decided that the robot will stop, and turn left.

They also programmed the LED light and the bumpers.

# Vex Robots - Programming Phase

# Student Voice

“I am really good at math. I finish my work quickly and sometimes my teacher just gave me more of the same work. Coding gave me the opportunity to challenge my knowledge of math.”

“I’m okay at math. I became better at developing basic codes. I also like seeing what other students developed. That gives me the chance to make my program better.”

“Coding and working with VEX robots helped me to see the math. Like, did you know that the degree of angles MATTER?!”

# “Tech Walk”

Let's play / explore:

Try building a circuit with Arduinos

Explore a Vex Robotics kit and the built model

Create with a Makey Makey

Take a Sphero for a spin
